## **Continuation Sheet (PTO-303)**

Application No.

Applicant argues that the previous office action "fails to point to anything that describes a boost forced produced based on a transmission force. Applicant disagrees. The claim states "the leaf springs each assume an orientation such that a boost force assisting an attractive force acting on the armature is produced." On page 5, lines 11-13 applicant states "the boost force is produced due to the orientation of the leaf springs." The orientation of the springs of the Hasegawa is identical to that of applicants disclosed invention.

Applicant argues that the direction of rotation of their invention is clockwise, and therefore the rotation direction of the Hasegawa reference is also clockwise. Examiner disagrees. The Hasegawa reference does not indicate the direction of rotation of the clutch unit. Further, the Fig. 1 of the Hasegawa reference shows the clutch orientated in the opposite direction of the clutch of the applicant as seen in Fig. 1 of the disclosed application. This would stand to reason that the rotation direction of the clutch of Hasegawa would be in a counter-clockwise direction in the view show in Fig. 3 of the reference.

Applicant argues that "the mere disclosure of 'orientation' is not a sufficient disclosure of an orientation that produces a boost force assisting an attractive force acting on the armature." Examiner disagrees, as the applicant has only claimed the orientation of the leaf springs being the mechanism which allows for the boost force. The boost force is a function of the orientation of the leaf springs, further, claims directed to >an< apparatus must be distinguished from the prior art in terms of structure rather than function. The reference discloses all the claimed structural limitations and therefore anticipates the claim. "Apparatus claims cover what a device is, not what a device does." Hewlett-Packard Co. v. Bausch & Lomb Inc., 909 F.2d 1464, 1469, 15 USPQ2d 1525, 1528 (Fed. Cir. 1990). See MPEP 2114.
